ROPWAX

Non Absorbable Sterile Bone Wax

ROPWAX - Sterile Bone Wax

Bone Wax is a mixture of beeswax, paraffin and isopropyl palmitate, a wax-softening agent. It is opaque and has a waxy odor. It's indicated for use in control of bleeding from bone surfaces during surgical procedures.

It achieves local haemeostasis of bone by acting as a mechanical (tamponade) barrier. It does not act biochemically and is non absorbable. It is available sterile in individual foil envelopes, each containing 2.5 g and packed in an individually sealed overwraps. Surgical wax is sterilized by Gamma radiation.

Packs should be opened just prior to use to minimize the possibility of contamination and excessive drying and should be used immediately. The Surgical Wax should not be re-sterilized or subjected to excessive heat.

Additional Information:

- Material : Beeswax, Paraffin & Isopropyl Palmitate
- Color : Opaque
- Absorption : Minimally Resorbable
- Sterilization : Gamma Radiation
- Shelf Life : 5 Years
- Product Characteristics : Helps local haemostasis by functioning like a mechanical barrier & is biochemically inert
- Packaging : In aluminum foil packages

FEATURES & BENEFITS

- Soft, easy to form and apply
- Easy to handle due to peel off pack with non-stick cover
- Provided sterile for single use only Biochemically inert
- Minimally absorbable
